Figures

3.1	An information structure	18
3.2	Heterogeneous information	19
3.3	Asymmetric information	19
3.4	A noisy signal	20
3.5	Event trees	21
3.6	The fineness of an information structure	24
3.7	Where the fineness criterion fails	24
3.8	Two noisy binary signals	25
4.1	Game tree for the Elementary Game	38
4.2	Probability square for the Elementary Game	39
4.3	Alice's dice: Game tree	41
4.4	The value of a signal under risk neutrality	45
4.5	Value of a signal under risk aversion	49
4.6	The timing of uncertainty resolution	51
4.7	RINCE preferences and information love	53
4.8	The St. Gallen grading experiment	55
5.1	The probability of successful search	63
5.2	The optimal amount of information	64
5.3	Marginal value and marginal cost of precision	66
6.1	Production costs under creative destruction	100
6.2	Innovation and monopoly power	102
6.3	Profits of a regulated monopolist	103
7.1	Probabilities of outcomes in the election example	126
7.2	Evolution of prices in the election example	128
7.3	Risk premia in bond yields of Swiss banks	139
8.1	Information structure and common knowledge	154
8.2	The island hopping analogy	154
8.3	Prior information on the airline deal	156
8.4	Intermediate information on the airline deal	158
8.5	Final information on the airline deal	158
8.6	Poisson distribution	165
9.1	Strategic substitutes and complements	177
9.2	Reaction functions	182
9.3	Time line of the Diamond–Dybvig model	192

9.4	Optimal consumption in the Diamond–Dybvig model	193
9.5	The incentive to withdraw	196
10.1	An informational cascade	210
10.2	Probabilities of a cascade	215
11.1	Inflation expectations of Polish households	230
11.2	An inattentive consumer	237
11.3	An inattentive saver	238
11.4	Market expectations and the importance of higher-order beliefs	243
12.1	The expected loss due to the winner's curse	262
13.1	Hidden information: the time line	278
13.2	Information structure under hidden quality	278
13.3	Hidden information with two qualities	279
13.4	Partial market failure	280
13.5	Market breakdown	281
13.6	Adverse selection	282
14.1	Getting the right car	309
14.2	Information structures *ex ante*	313
14.3	Information structure *ex post*	314
14.4	Monopolistic contracts: symmetric information	316
14.5	Monopolistic contracts: asymmetric information	318
14.6	Competitive contracts: symmetric information	321
14.7	Competitive contracts: asymmetric information	321
14.8	Optimal contracts for observable types	324
14.9	Unobservable types: Compatible contracts	325
14.10	Unobservable types: Optimal contracts	326
14.11	Contracts for investors with observable type	331
14.12	The subordination effect	332
14.13	Contracts for investors with hidden type	333
14.14	Signaling	338
15.1	Post-contractual hidden information	350
15.2	An example of a contract	351
15.3	The debt contract	352
16.1	Hidden action: The time line	372
16.2	Hidden action: The game tree	373
16.3	The optimal contract for a low effort	376
16.4	The optimal contract for a high effort	378
16.5	The risk–return relationship	383
16.6	Expected return as a function of success return	384
16.7	Reaction functions of depositors and of the bank	387
16.8	Credence goods: the game tree	391
17.1	Consumption plan under hyperbolic discounting	414
17.2	Alice's and Bob's consumption profile	415
17.3	Self-confidence model: the time line	418
17.4	Self-serving beliefs	420
17.5	Choosing optimal self-confidence	422
